

This meeting transcript focuses on a single mathematical problem: integrating the function $x^2\sin(3x)$. The discussion centers around determining the most appropriate integration technique.

* **Main Topic:** Solving the definite integral of $x^2\sin(3x)$.

* **Methods Considered:** The participants initially considered substitution, but quickly dismissed it as ineffective due to the inability to cancel out terms after the substitution. They then decided to try integration by parts.

* **Decision Made:** The group collectively agreed to proceed with integration by parts as the chosen method for solving the integral. The transcript indicates this is the first step in a larger process, implying the DI method (likely referring to a specific integration by parts strategy) will be applied further.

* **Action Items:** No explicit action items are assigned in this short transcript excerpt. The next steps in solving the integral using integration by parts would constitute the implicit action item for all participants.

* **Points of Agreement:** There was unanimous agreement that substitution was not a viable approach and that integration by parts was the preferred method to proceed.

* **Points of Disagreement:** No disagreements are apparent in this excerpt. The discussion is collaborative and focused on a shared problem-solving objective.
